

PERFLIGHT™

AVIATION GRADE
 CONCRETE FLOOR COATINGS

Urethane top coated epoxy has been proven to be the ultimate performance concrete floor coating system for demanding applications such as commercial kitchens, automobile manufacturing and aircraft hangars. And only one type of urethane, aliphatic polyester, can claim to be the best in performance. All PERFLIGHT™ floor coating systems use this “best of the best” urethane finish coat.

PERFLIGHT™ 100

For most applications, PERFLIGHT™ 100 is the perfect choice to protect your floor. A thick 7 mil epoxy underlayment bonds tenaciously to the concrete and fills in minor surface defects. Finished with 3 mils of urethane, the system provides incredible abrasion, chemical and UV resistance. Many color and anti-slip finish options are available.

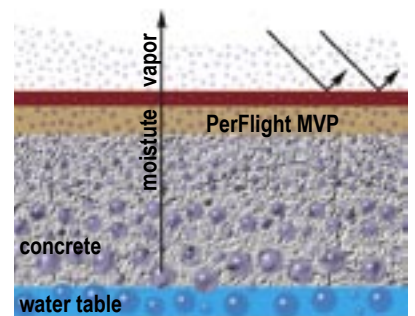

PERFLIGHT™ HBR

Where light to moderate deterioration of the concrete surface is present, PERFLIGHT™ *High Build Resurfacer* is the perfect solution. A self leveling epoxy slurry coat smooths out spalled, rough concrete floors and cures with a compressive strength of over 10,000 psi. Finished with 3 mils of urethane, the floor is quickly repaired and protected without compromising durability or aesthetics.

PERFLIGHT™ MVP

Slabs below grade or over a high water table can be a problem for most coatings. Water vapor (hydrostatic pressure) can literally push a coating off of even a well prepared surface. PERFLIGHT™ MVP is *Moisture Vapor Permeable* so that water vapor can escape, and the coating remains tightly bonded. Since it is finished with an aliphatic urethane, you get the high end properties that keeps the floor protected and looking great.

White and Black also available as standard colors. Ask about custom color matching.
